

Pocket CVI

Pick any color on your Mac — and turn it into a complete, synced brand kit.

WHAT IT IS

A native macOS color picker and brand-kit manager. A magnifier loupe picks any pixel on screen (⌘⇧P, any display, HEX/RGB/HSL); whole brands import from a URL — colors named by role, logos at full resolution, webfonts and a page screenshot. Kits hold colors, logos, fonts, documents and rich-text notes, sync between Macs through the user's own iCloud, and export as design manuals, swatches (Illustrator, Photoshop, PowerPoint, Keynote, CSS/JSON) or single-file .pocketcvi kits.

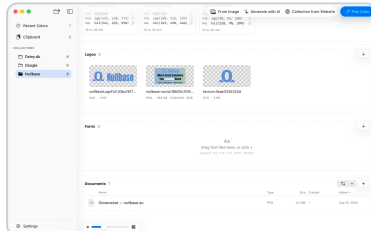

KEY FEATURES

- Loupe screen picker with continuous picking and a clipboard watcher
- Brand kits: colors, logos, fonts, documents and CVI notes in one place
- Website import — a brand kit from a URL
- Generated multi-page A4 design manuals; WCAG-style contrast checks
- iCloud sync across Macs, files included; works offline
- Pro: five AI features on the user's own key (never proxied) plus two local pro tools — design manuals and swatch export

SCREENSHOTS

A brand kit imported from a website: notes, roles and values.

Each kit also holds the brand's logos, fonts and documents.

FACT SHEET

Developer	Nullbase ApS, Randers, Denmark
Version	0.4.7 · 25 August 2026
Price	Free core, forever. Pro €5/month or €99 once; EU VAT per law
